

«EKOR-SP» Product Company is an active player in the market of organomineral biological products for agriculture and environmental protection. The company was founded in 2017 to produce innovative high-quality biopreparations of unique characteristics providing competitive advantages to our Partners and Clients.

The mission of «EKOR-SP» is to extract and transform forces of Nature for the benefit of Russia.

OUR PRODUCTS

eko-sp.ru

Concentrated potassium humate with «EKO-SP» microelements for crop farming (production) is a new generation of high-quality complex organomineral fertilizers with a full set of: fertilizer elements (NPK), humic acids, fulvic acids, amino acids, low-molecular organic acids, micro and macro chelated elements.

Achievements: Highest hemic content and recovery index for biopreparations.

eko-sp.pro

«EKO-SP» organomineral degradator for animal and poultry farming is an organic reagent with the unique fermentation activity index of biological catalysts, recovery index and humic compounds.

Achievements: disinfection of animal and birds waste products controlled by accelerated bioconversion and biosynthesis of new compounds in complex microbiological media.

eko-sp.su

«EKO-SP» humic feed additive for farm livestock is a reliable and sure method of stimulating productivity of animals and poultry, based on unique properties of humic acids.

Achievements: High biological activity improves metabolic processes in animals: increases appetite, improves the function of liver, gastrointestinal mucosa, and cardiovascular system, stimulates the gas-energy metabolism, increases blood oxygen content, increases serum protein content which stimulates muscular tissue growth at the reduction of feed base cost.

«EKO-SP» organo-mineral absorbent for ecology is an eco-friendly, harmless reagent for soil and water purification from hydrocarbon contaminants.

Achievements: the quickest possible contaminant absorption, high hydrophobicity, inertness, full biodegradability.
